

Task to implement a pie chart

1. **Load a csv file from disk.** Your application provides a dialog that allows users to select a file. The input file has two columns, but the number of rows is not fixed. An example is shown in Table 1.

Table 1

Country	Population($\times 1k$)
America	318892
India	253609
Brazil	202657
Pakistan	196194

2. **Draw a pie chart based on the input file.** The items are represented as slices in a pie chart. We don't limit the style of the chart, but the content should be as clear and beautiful as possible.

Hint: `QFileDialog`

3. A testing file is also uploaded. Write a README to describe how to use your application.

Important Notes:

- Submit your Qt project with a README file.
- Due: **2019/12/1 11:59pm**
